How much does a COVID-19 booster Protect?

Comparisons of death from COVID-19 by Vaccination Status

Recent data from [Israel](#) shows that individuals who DO NOT receive a booster shot are 15-fold more likely to die from COVID due to OMICRON. Data from [Texas](#) during the same frame shows exponentially more deaths for those who remain unvaccinated.

The Omicron variant currently present in Arizona and is driving up hospitalizations to a critical level.

Protect yourself by getting a booster in addition to getting fully vaccinated.

to find vaccines or boosters near you.

The ADHS map provides all vaccine locations statewide and which type of vaccine is available at each site.

The State of Arizona currently has enough Pfizer vaccines to provide boosters for those eligible and people who still need their first vaccine dose. You can receive a booster shot different from your original shot brand.
